

The **Analytics** Dashboard is the first tab in the **Platform Menu**. This workspace allows you to run visual analytics on assessment data.

The Analytic Dashboard has four tabs at the bottom left (To do list by Assessment Cycle, Outcomes by Type, Results and Implemented Changes). These tabs provide quick access to program data and information. Information on the tabs can be filtered using the filters such as Outcome Status, Outcome Type or Years Outcomes will be Assessed at the top right of the workspace.

Each of the four tabs is described below:

**To Do List by Assessment Cycle:** This tab provides an overview of completed sections and those that need to be worked on. Programs are expected to use a minimum of 2 methods of assessment per outcome (at least one must be direct). If only one method is provided, the "**Methodology**" section will display red, or as incomplete.

Outcome Title         Methodology         Implemented Changes         Results           Collaboration         Implemented Changes         I	
Program satisfaction and readiness to enter the teaching profession	

**Outcomes by Type:** This tab offers an overview of the outcomes and their types, helping programs/units see which outcome types they are concentrating on. Reviewing this tab will help clarify priorities.

For example, if a co—curricular unit is providing learning opportunities for students but only focusing on effectiveness outcomes rather than learning outcomes, this table will highlight this information.

**Results:** This tab provides a comprehensive overview of outcomes, methods, results, and use of results. The data conclusions are color-coded. **Red** indicates the criterion is not met, **yellow** indicates it is partially met, and **green** indicates it is met.

Implemented Changes: This tab provides an overview of the changes made as a result of assessment data.

The purpose of the last two tabs (**Results** and **Implemented Changes**) is to offer a quick overview of the information entered into the platform, rather than generating a report. They function similarly to an Excel spreadsheet, allowing manipulation of columns as needed (in terms of width to help increase readability).
